

# Mobile camps

## Safety & security

**EVITECH's Jaguar® VDS200 video analytics wallet ensures protection of mobile camps. A contract for supply of unlimited quantities has been established by the French army.**

**Issue :** When moving rapidly over an uncertain land, people have to secure their perimeter. The classical solution for military units in the past was to deploy mines, a thing which is nowadays forbidden by international conventions. The need concerns small detection equipment, rapidly deployed, and effective in order to detect any intruder within a distance of 200 meters.

**Solution :** Among several solutions that can be rapidly deployed, the VDS200 video protection wallet is very efficient and can cover 360° and more perimeter. Used with a 360° sensor like the one on the left, or with cameras (thermal or visible), the solution ensures detection of any approaching individual.

**Tests :** several years of tests have been done by military teams like STAT, EMAT, GIGN, Thales, and DGA personal.

**About Evitech :** Created in 2005 in France from a military R&D project, the company has rapidly developed with an average 200% CA progression rate. From a turnover of 500 K€ in 2008, the company targets a turnover of 1 M€ for 2009. EVITECH's software products address the fields of smart video surveillance for global security.
